**ENGINEERING STATEMENT**

This engineering exhibit, of which this statement is a part, was prepared in accordance with the Rules and Regulations of the Federal Communications Commission and pursuant to the provisions of Section V-B of FCC Form 301 on behalf of NORTH JEFFERSON BROADCASTING COMPANY, INC. (hereafter North Jefferson) in support of an application for authority to construct an FM broadcast facility operating on channel 254 (98.7 Mhz) at WARRIOR, ALABAMA. The effective radiated power proposed is 6.2 KW, both in the horizontal and vertical plane, and the antenna center of radiation is 200 meters. This power/height combination is a maximized class C3 facility permitted under the current rules and regulations.

Notification of the proposed tower construction location has not been made to the FAA since the height of the tower is only 26 meters tall and the nearest airport is 37 kilometers distant. Engineering specifications for the major aspects of the proposed tower are included in figure E-2.

**PROPOSED TRANSMITTER AND STUDIO LOCATIONS**

North Jefferson proposes to operate from a site uniquely described by the geographic coordinates:

(NAD 27)  
33° 53' 34" North Latitude  
86° 50' 09" West Longitude

(NAD 83)  
33° 53' 34" North Latitude  
86° 50' 09" West Longitude

Figure E-4 is a portion of the Blount Springs, Alabama 7.5 minute U.S.G.S. topographic quadrangle map showing the proposed transmitter site. No FM or TV transmitters are located within 60 meters of the proposed antenna location. Since there are no other FM or TV facilities located nearby there is not expected to be any receiver induced intermodulation interference or other objectionable interference.

Because the area is rural, there is not expected to be any problem with blanketing interference. The applicant is aware of the provisions of Section 73.318 of the FCC's Rules and the requirement for satisfying all complaints of blanketing interference that are received within a one-year period.

The main studio for the station will be located in the WARRIOR area.

**COVERAGE CONTOURS**

The three-to-sixteen-kilometer average terrain elevations were derived from the National Geophysical Data Center (NGDC) 30-second topography data base. However, the site elevation was determined from the U.S.G.S. 7.5 minute Blount Springs topography quadrangle map.

The effective antenna radiation center height for each of the eight standard 45-degree spaced radials was used in conjunction with the F(50,50) metric curves of Figure 1 of Section 73.333 of the Rules to determine the distances to the 70 dBu and 60 dBu coverage contours. The contours drawn from the data are depicted on the map in figure E-5. As is readily evident, all of WARRIOR, ALABAMA is included within the proposed 70 dBu coverage contour as required by the rules. The radial drawn through the principal city is depicted on the profile plot in Engineering Exhibit E-1. This permitted a determination to be made that there are no major obstructions in the intervening path from the transmitter site to the principal community.
